Course Code:	24DSEU5P01
Course Name:	Operating Systems

L	T	P	Credit
3			3

Course Prerequisites:

Fundamentals of Electronics and Computer

Course Description:

This is one of the core course of Data Science Engineering Programme. In this course you will become familiar with the core concepts of OS - how OS work, how a **processes & threads** are created, **inter-process communication & synchronisation**, the various **scheduling** algorithms, **memory management** & memory allocation strategies, etc. This course will be also helpful for exams like GATE.

Course Outcomes:

After the completion of the course the student will be able to -

SDGs

CO1	Describe the basic concepts of operating systems.	4,9
CO2	Evaluate the performance of various scheduling & page replacement algorithms.	8,9
CO3	Distinguish techniques of inter process communication and synchronization.	9
CO4	Identify potential deadlock situations and propose appropriate strategies to handle or avoid deadlocks.	8,9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	2									1	2	1	
CO2	2	2			2					1	2			
CO3	1	1	2	1	3							1		2
CO4	2	2		1	1								1	2

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	In Semester Evaluation 1 (ISE1)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	Mid Semester Examination (MSE)	30%	50% of course contents
3	In Semester Evaluation 2 (ISE2)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
4	End Semester Examination (ESE)	50%	100% course contents

Handwritten signature

Course Contents:			SDGs
Unit 1	Introduction	6 Hours	4, 8, 9
Introduction to OS, OS Structure, Types of OS, OS Kernel, OS Services, Users Prespective of OS, System Boot Process, Architecture of UNIX OS			
Unit 2	Process, Threads & Scheduling	9 Hours	4, 8, 9
Process: Concept, States and Transitions, Context, Creation (fork), Termination (exit), Signals (signal, kill), Awaiting Process Termination(wait, waitpid), Invoking other programs (exec), Threads (pthreads) Process Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms.			
Unit 3	Interprocess Communication	6 Hours	8, 9
Inter-Process Communication - Pipe, Shared Memory, Message Passing			
Unit 4	Process Synchronization	7 Hours	8, 9
Inter-Process Synchronization: The Critical Section Problem, Peterson’s Solution, Synchronization Hardware, Semaphores, Classical Problems of Synchronization			
Unit 5	Deadlocks	6 Hours	8, 9
Deadlock: System Model; Deadlock Characterization; Methods for Handling Deadlocks; Deadlock Prevention; Deadlock Avoidance; Deadlock Detection and Recovery from Deadlock			
Unit 6	Memory Management	8 Hours	8, 9
Memory background, Hierarchy, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Virtual Memory, Demand Paging, Page Replacement Algorithms, Allocation of Frames, Thrashing.			

Text Books:
1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne: Operating System Principles, 8th edition, Wiley India, 2009.
2. Operating Systems –Concepts and design –Milan Milenkovic (TMGH)

Reference Books:
1. The Design of Unix Operating System - Maurice J. Bach (PHI)
2. Operating Systems: Internals and Design Principles (8th Edition)- by William Stallings (Pearson Education)
3. Modern Operating Systems by Andrew S. Tanenbaum (Pearson Education International)
4. Unix concepts and administration – 3rd Edition – Sumitabha Das (TMGH).

Course Code:	24DSEU5P02
Course Name:	Computer Networks

L	T	P	Credit
1		2	2

Course Prerequisites:

Nil

Course Description:

This course explains how computers communicate in a network using different devices, protocols, and models like OSI and TCP/IP. It covers important topics such as IP addressing, routing, data transfer methods, and internet services like HTTP, DNS, and email.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Explain fundamental networking concepts and the layered architecture of the OSI and TCP/IP models	4
CO2	Analyze and apply IP addressing schemes, including subnetting and supernetting for IPv4.	9
CO3	Describe the functionalities and characteristics of key network layer and transport layer protocols.	9
CO4	Illustrate the role and operation of common application layer protocols and services.	9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	2								1		2	1	
CO2	2	2			2				1	2				
CO3	1	1	2	1	3							1		2
CO4	2	2		1	1								1	2

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal	50%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	End Semester Examination (OE/POE)	50%	100% course contents

Course Contents:

Unit 1	Introduction to Network	3 Hours	SDGs
	Data Communication, Networks Devices & Topologies, Network Types, Internet, Layered Tasks, OSI Reference Model and Layers, TCP/IP Protocol Suite		4
Unit 2	Network Layer	4 Hours	
	Logical Addressing: IPv4 and IPv6 Addresses, Address Space, Special Addresses, Notations. Subnetting and Supernetting (IPv4). Network Layer Protocols: Internet Protocol (IP): Datagram Format, Fragmentation. Internet Control Message Protocol (ICMP). Address Resolution Protocol (ARP). Reverse Address Resolution Protocol (RARP). Routing: Routing Algorithms: Shortest Path, Flooding, Distance Vector Routing, Link State Routing.		9
Unit 3	Transport Layer	4 Hours	
	Process-to-Process Delivery. Transport Layer Protocols: User Datagram Protocol (UDP): Characteristics and Applications. Transmission Control Protocol (TCP): Connection Establishment, Connection Termination, Flow Control, Congestion Control. Ports and Sockets.		9
Unit 4	Application Layer	4 Hours	
	DHCP. HTTP and WWW. DNS. Email (SMTP, POP3, IMAP). FTP.		9

Text Books:

1. Data Communications and Networking – Behrouz A Forouzan (The McGraw Hill)
2. TCP/IP Protocol Suite- Behrouz Forouzan-(The McGraw Hill)

Reference Books:

1. Computer Networks – Andrew S. Tanenbaum- (Prentice Hall) 5th Edition
2. Computer Networking with Internet Protocols and Technology, William Stallings (Prentice Hall)

Signature

Lab Assignments		SDGs
Experiment 1: Demonstration of networking commands	2 Hours	4, 9
Experiment 2: Design and simulation of sample network	2 Hours	9
Experiment 3: Studying IPv4 and IPv6 addressess	2 Hours	9
Experiment 4: Design and simulate working of Virtual LAN	2 Hours	9
Experiment 5: Implementing TCP/UDP client for standard service using socket programming	2 Hours	9
Experiment 6: Implementing TCP/UDP Server using socket programming	2 Hours	9
Experiment 7: Installation and Configuration of FOSS server 1 (DHCP/DNS)	2 Hours	9
Experiment 8: Installation and Configuration of FOSS server 2 (Web, EMail, FTP)	2 Hours	9

Course Code:	24DSEU5P03
Course Name:	Database Engineering

L	T	P	Credit
3	0	0	3

Course Prerequisites:

Set Theory, Operating System, Data Structures, Basic Software Engineering Concept (SDLC)

Course Description:

The Database Engineering course provides a comprehensive understanding of database systems and their role in the design, development, and management of information systems. It introduces students to database theory, architecture, design methodologies, query languages, and data modeling techniques.

Course Outcomes: After the completion of the course the student will be able to -

		SDGs
CO1	Understand fundamentals of Database Management Systems	4, 9
CO2	Analyze the problem & construct good database design	9
CO3	Apply SQL queries to design & manage the database	9, 16
CO4	Understand Transactions Model and the Recovery Schemes in Database Management Systems	9, 16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Contents:		SDGs
Unit 1	INTRODUCTION TO DATABASES	6 Hours
Database System Applications, Purpose of Database Systems, View of Data, Database Languages, Specialty Databases, Database Users & Administrators, Structure of Relational Databases, Database Schema, Keys, Relational Query Languages, Relational Operations.		9, 16
Unit 2	E-R MODEL AND DATABASE DESIGN	8 Hours
E-R Model: The Entity-Relationship Model, Constraints, Entity-Relationship Diagrams, Reduction to Relational Schemas Normalization: Data Redundancies & Update Anomalies, Functional Dependencies, The Process of Normalization, First Normal Form, Second Normal Form, Third Normal Form, Boyce-Codd Normal Form.		9
Unit 3	STRUCTURED QUERY LANGUAGE (SQL)	7 Hours
Overview of the SQL Query Language, SQL Data Definition, Basic Structure of SQL Queries, Additional Basic Operations, Set Operations, Aggregate Functions, Nested sub Queries, Modification of Databases.		9, 16
Unit 4	DATA STORAGE & INDEXING	7 Hours
File Organization, Organization of records in File, Data Dictionary Storage, Database Buffer, Basic Concepts indexing & hashing, Ordered Indices, B+ Tree Index files, Multiple-Key Access, Static Hashing.		9
Unit 5	TRANSACTION MANAGEMENT	7 Hours
Transaction Concept, A Simple Transaction Model, Transaction Atomicity and Durability, Transaction Isolation, Serializability, Lock-Based Protocols, Deadlock Handling, Timestamp-Based Protocols, Validation-Based Protocols		9, 16
Unit 6	RECOVERY SYSTEM	7 Hours
Failure Classification, Storage, Recovery and Atomicity, Recovery Algorithm, Failure with Loss of Nonvolatile Storage, Remote Backup Systems		9, 16

Text Books:

1. Database System Concepts, A. Silberschatz, H.F. Korth, S. Sudarshan, 6th Edition, Mc Graw Hill Education.
2. Database Systems - A practical approach to Design, Implementation and Management Thomas Connolly, Carolyn Begg, 3rd Edition, Pearson Education

Course Contents:	SDGs
Assessment No. 1 : E-R Model	4,9
Assessment No. 2 : Reduce above mentioned E-R Diagram into Relational Model	4,9
Assessment No. 3 : Normalize any database from first normal form to Boyce-Codd Normal Form (BCNF)	4,9
Assessment No. 4 : Use DDL Queries to create, alter (add, modify, rename, drop) & drop Tables	4,9
Assessment No. 5 : Use DML Queries to insert, delete, update & display records of the tables	4,9
Assessment No. 6 : Create table with integrity constraints like primary key, check, not null and unique	4,9
Assessment No. 7 : Create table with referential integrity constraints with foreign key, on delete cascade and on delete set null	4,9
Assessment No. 8 : Display the results of set operations like union, intersections & set difference	4,9
Assessment No. 9 : Display the results of Join Operations like cross join, self join, inner join, natural join, left outer join, right outer join and full outer join	4,9
Assessment No. 10 : Display the records using Aggregate functions like min, max, avg, sum & count. Also use group by, having clauses	4,9
Assessment No. 12 : Create & Update views for any created table	4,9
Assessment No. 13 : Study of B+ tree indexing	4,9
Assessment No. 14 : Implement static hashing (Simulation)	4,9

Text Book:

1. Database System Concepts, A. Silberschatz, H.F. Korth, S. Sudarshan, 6th Edition, Mc Graw Hill Education.

Course Code	24DSEU5P05	L	T	P	Credit
Course Name:	Programming Lab - III	2	0	2	3

Course Prerequisites:

Basic programming knowledge

Course Description:

This course provides a comprehensive introduction to Kotlin for Android development, covering language basics, and advanced features. Students will explore user interface design with layouts and views, navigation using intents, dialogs, menus, and various Android storage options, including SQLite databases and content providers.

Course Outcomes:	After the completion of the course the student will be able to -	SDG
CO1	Learn the basics of Kotlin and how to use it for Android apps	4,9
CO2	Understand how the Android system works and the main building blocks of apps	4,9
CO3	Create user interface designs to demonstrate practical understanding of app layout and user navigation	4,9,10

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1								1	1		3	1	
CO2	1	1	2		3			2	1	2			3	2
CO3	1	1	2		3			2	1	1		3	3	2
CO4					3				1				2	

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal Assessment	50%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	POE	50%	Practical/Oral Examination

Course Contents:		SDG
Unit 1	Introduction to Kotlin Programming Language	7 Hours
Kotlin Basics: Kotlin Advantages, How Kotlin Program Work, Creating, Compiling and running Kotlin program, Input and Output, Kotlin Variables, Kotlin Data Types, operators, Type checks and casts, arrays, Control Flow statements, functions, Null safety. Object-Oriented Programming (OOP) in Kotlin: Object and Classes, constructors, overloading, Abstract Class, Interface, Sealed Class, Generic Class, Enum Class, Inner and anonymous Inner class. Non-Blocking Programming Techniques in Kotlin: Threading, Callbacks, Futures, promises, and others, Reactive Extensions, Coroutines. Advanced Kotlin Concepts: Kotlin collections, exception handling, Packages and Imports. Introduction to Kotlin Multiplatform		4,9
Unit 2	Introduction to Android Application	8 Hours
Background: Evolution of Mobile Operating Systems, History of Android versions, Android OS architecture: Android OS Stack, Linux kernel, Native Libraries/DVM, Application Framework, Applications. Android Application Components: Activity, Fragments, Intents, BroadcastReceivers, Content Providers, Services Activities: Activity lifecycle, Activity Back Stack Fragments: Definition and purpose of Fragments, Fragment Lifecycle and its relationship with Activity lifecycle. Introduction to Android SDK Components of android SDK (sdk tools) Compilation, Building and running of android application Creating a Android Project: Project Directory Structure, Logging in Android (Logcat), Managing Exception with Logcat, Android Manifest File, Android Resources and Resource Directories, Permissions.		4,9
Unit 3	Layouts	7 Hours
View Hierarchy: Android View and View Group classes and XML Elements, Layouts: Linear Layouts, Relative Layout, Table Layout, Frame Layout, Constraint Layouts, and their important properties. Padding and Margins with Layouts. Basic Views their properties and Events: TextView, Buttons & types, ImageView, EditText, CheckBox, ImageView, VideoView, GridView, RatingBar etc. Advanced Views: ListView, RecyclerView, Card View Intents: Implicit & Explicit Intents, Component of Intent, examples of some standard intents (Telephony, SMS etc), Android Intent Messaging via Intent Objects, Using Intents with Activities, pending Intents, Broadcast Receivers		4,9,10
Unit 4	Dialogs, Menus and Storage	8 Hours
Dialogs: Components of Dialog, Alert Dialog, Seek Bar, Date Picker Dialog, Time Picker Dialog, Custom Dialogs Menus: Menu Inflators, Context Menu, Options Menu, Handling menu click events. Android Storage Options: Shared Preferences, Internal Storage, External Storage SQLite Databases: SQLite Database in your application, Installing SQLite plugin, DbHelper, The Database Schema and Its Creation, Four Major Operations of SQLite. SQLite databases and Content Providers: Creating an SQLite Database, querying an SQLite DB Table		4,9
Text Books:		
1. Android Programming with Kotlin for Beginners" by John Horton		

Handwritten signature

Experiment List		SDGs
1	Installation and setup of Kotlin, JDK, Android Studio, and execution of the first Kotlin program	4,9
2	Write Kotlin programs demonstrating variables, data types, operators, input/output, and type	4
3	Develop Kotlin programs using control statements, arrays, loops, and functions	4,9
4	Implement Object-Oriented Programming concepts in Kotlin (classes, objects, constructors, inheritance, interfaces, abstract classes, sealed classes, enum classes, generic classes, inner and anonymous classes)	9
5	Develop Kotlin programs demonstrating collections, exception handling, null safety, packages, and coroutines for asynchronous programming	8,9
6	Create a Kotlin Multiplatform project and explore project structure and shared code	9,12
7	Install Android Studio, configure Android SDK, create and run the first Android application, and study project structure	4,9
8	Explore Android application components by creating Activities, Fragments, and implementing Activity and Fragment lifecycle methods	7,12
9	Demonstrate Intents (Explicit and Implicit), Broadcast Receivers, Services, and permissions using AndroidManifest.xml	9,16
10	Design Android user interfaces using Linear, Relative, Frame, Table, and Constraint Layouts with common UI widgets	10
11	Develop Android applications using RecyclerView, CardView, ListView, GridView, and implement event handling	7,9
12	Implement Android Intent messaging, Pending Intents, and launch built-in applications (Phone, SMS, Browser, Email, Maps)	9,11
13	Design Android applications using AlertDialog, Custom Dialog, DatePicker, TimePicker, SeekBar, and implement Options and Context Menus	3,10
14	Develop Android applications using Shared Preferences, Internal Storage, and External Storage for data persistence	9,16
15	Create an SQLite database application implementing CRUD operations and Content Provider for data sharing	
16	Develop Android applications using Shared Preferences, Internal Storage, and External Storage for data persistence	9,16,12
17	Create an SQLite database application implementing CRUD operations and Content Provider for data sharing	9,16,10

Course Code:	24DSEU5M06
---------------------	------------

Course Name:	Data Mining and Warehousing
---------------------	-----------------------------

L	T	P	Credit
3	0	0	3

Course Prerequisites:

Foundational knowledge of Database Systems, Data Structures, Statistics and Probability

Course Description:

This course introduces the fundamental concepts and techniques of data mining and data warehousing. It equips students with the skills to design and implement data warehouses and extract meaningful insights from large datasets through data mining. Students will explore various data mining algorithms and learn how to preprocess data effectively. The course also covers data warehouse architecture, OLAP operations, schema modeling, and real-world applications in business and industry. Emphasis is placed on both theoretical understanding and practical implementation using industry-standard tools.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Implement and evaluate data mining algorithms such as classification, clustering, and association rule mining.	9
CO2	Understand the concepts and architecture of data warehousing, including schema design and OLAP operations.	9
CO3	Apply data preprocessing techniques to prepare real-world datasets for analysis.	9
CO4	Utilize data mining and warehousing tools to analyze large datasets and generate actionable insights for business applications.	9, 16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Signature

Course Contents:			SDGs
Unit 1	Introduction to Data Mining	6 Hours	9
Definition, Importance, and Applications of Data Mining, Knowledge Discovery in Databases (KDD) Process, Types of Data: Structured, Semi-structured, and Unstructured, Data Preprocessing: Cleaning, Integration, Reduction, and Transformation, Data Mining Architecture			
Unit 2	Data Mining Techniques	9 Hours	9
Association Rule Mining: Apriori Algorithm, FP-Growth algorithms Clustering: K-Means, Hierarchical Clustering, Outlier Detection Classification: Decision Trees, Bayesian Classification, Rule-based classification, Model evaluation and cross-validation			
Unit 3	Advanced Topics in Data Mining	6 Hours	9
Mining data streams, Web and text mining, Temporal and spatial data mining, Social network mining			
Unit 4	Introduction to Data Warehousing	6 Hours	9
Data Warehousing concepts, Differences between OLTP and OLAP, Data warehouse architecture, Data Marts, ETL Process (Extract, Transform, Load), Metadata			
Unit 5	Data Warehouse Design and Implementation	9 Hours	9
Dimensional modeling: Star, Snowflake, Fact Constellation Fact tables and Dimension tables Data Cube and OLAP operations (Roll-up, Drill-down, Slice, Dice, Pivot)			
Unit 6	Data Warehousing and Mining Applications	6 Hours	9, 16
Real-world applications, Trends in data warehousing (cloud DW, real-time DW), Data privacy and ethical issues in data mining, Case studies from industry			

Text Books:

Course Code:	24DSEU5M07	L	T	P	Credit
Course Name:	Data Mining and Warehousing Laboratory			2	1

Course Prerequisites:

Basic knowledge of programming, SQL, database concepts, and foundational statistics

Course Description:

This course provides a practical introduction to Data Mining and Data Warehousing, focusing on core concepts like data preprocessing, classification, clustering, and schema design. Through simplified hands-on assignments, students learn to apply techniques such as association rule mining and ETL processes. Real-world case studies help bridge theory and practice, preparing students for analytical roles and projects.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Apply data preprocessing techniques and identify appropriate types of data for mining tasks	9
CO2	Demonstrate practical skills in using Data mining and Warehousing tools and technologies	9
CO3	Learn the use of technology in real-world analytical scenarios	9, 16

CO-PO Mapping:

Course Prerequisites:

Computer Network, Data Communication, Engg. Mathematics

Course Description:

This course gives you practical survey of both the principles and practice of cryptography and network security. In the first part of course, the basic issues to be addressed by a network security capability are explored by providing a tutorial and survey of cryptography and network security technology. The later part of course deals with the practice of network security.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Explain the use of Cryptographic algorithms to ensure data protection and integrity.	9,16
CO2	Apply the knowledge of cryptographic techniques to solve the problems on security.	9,16
CO3	Illustrate the different Network and Internet security protocols in TCP/IP stack.	9,16
CO4	Analyze the security facilities designed to provide system security.	9,16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2					1						2	2	2
CO2	2	3	3		2	2		2				2	2	2
CO3	1				2	2						2	2	2
CO4		2	2		3	3		2				2	2	2

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	In Semester Evaluation 1 (ISE1)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	Mid Semester Examination (MSE)	30%	50% of course contents
3	In Semester Evaluation 2 (ISE2)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
4	End Semester Examination (ESE)	50%	100% course contents

Course Contents:		
Unit 1	Introduction to Information Security	5 Hours
Overview: Computer Security Concepts, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, A Model for Network Security Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques, Rotor machines, Steganography. Case Study 1.1: Perform Encryption and Decryption using crypt tool.		4,9
Unit 2	Symmetric and Asymmetric Key Cryptography	8 Hours
Block Ciphers and the Data Encryption Standard: Block Cipher Structure, Data Encryption Standard (DES), A DES Example, Strength of DES, Block Cipher Design Principles, AES Structure, Multiple Encryption and Triple-DES Public Key Cryptography: Principles of Public-Key Cryptosystems, RSA Algorithm, Other Public key Cryptosystems - Diffie-Hellman Key Exchange, ElGamal Cryptographic system		9,16
Unit 3	Cryptographic Authentication Functions	8 Hours
Cryptographic Hash Functions: Applications of Cryptographic Hash Functions, Two Simple Hash Functions, Requirements and Security, Hash Functions Based on Cipher Block Chaining, Secure Hash Algorithm (SHA) Message Authentication Codes: Message Authentication Requirements, Message Authentication Functions, Requirements for MAC and Security of MACs, MACs Based on Hash Functions: MAC, MACs Based on Block Ciphers: DAA and CMAC Digital Signatures: Digital Signatures, ElGamal Digital Signature Scheme, Schnorr Digital Signature Scheme, Digital Signature Standard (DSS) Case Study 3.1: Working of Digital signature software tool Sign server		9,16
Unit 4	Key Management and User Authentication	8 Hours
Key management: Symmetric Key Distribution Using Symmetric Encryption, Symmetric Key Distribution Using Asymmetric Encryption, Distribution of Public Keys, X.509 Certificates, Public Key Infrastructure User Authentication Protocol: Remote User-Authentication Principles, Remote User-Authentication Using Symmetric Encryption, Kerberos, Remote User Authentication Using Asymmetric Encryption.		9,16
Unit 5	Internet security Protocols	6 Hours
Transport-Level Security: Web Security Issues, Secure Sockets Layer (SSL), Transport Layer Security (TLS), HTTPS, SSH Electronic Mail Security: Pretty Good Privacy (PGP), S/MIME, SET IP Security: IP Security Overview, IP Security Policy, Encapsulating Security Payload Case Study 5.1: Perform surveillance through packet sniffer tool like Wireshark & TCP Dump.		9,16
Unit 6	Firewall and Intrusion detection system	7 Hours
Firewalls: Introduction, Types of firewall, Firewall configuration, VPN, Types of VPN IDS: Overview of IDS, IDS Components, Approaches of IDS SIEM: Introduction to SIEM, SIEM Scenario and process flow, SIEM architecture, SIEM features Case study 6.1: Run Online Scanners like Virus Total, Jotti and No VirusThanks		9,16

Course Code:	24DSEU5E09	L	T	P	Credit
Course Name:	Theory of Computation	3			3

Course Prerequisites:

Discrete Mathematics, Sets, Cartesian Product and Functions

Course Description:

This course deals with the theoretical background of computer science.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Explain the fundamental concepts of formal languages, grammars, and automata.	4
CO2	Classify formal languages on the basis of their features.	9
CO3	Relate the computational models with the modern day computer technologies.	9
CO4	Design computational machines of various types for specified problems.	9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1			1

Course Contents:

Unit 1	Mathematical Induction, Regular Languages & Finite Automata	8 Hours	SDGs
	The Principle of Mathematical Induction Recursive Definitions, Definition & types of grammars & languages, Regular expressions and corresponding regular languages, examples and applications, unions, intersection & complements of regular languages, Finite automata-definition and representation, on-deterministic F.A., NFA with null transitions, Equivalence of FA's , NFA's and NFA's with null transitions.		4
Unit 2	Kleene's Theorem	5 Hours	4
	Part I & II statements and proofs, minimum state of FA for a regular language, minimizing number of states in Finite Automata.		
Unit 3	Grammars and Languages	10 Hours	9
	Derivation and ambiguity, BNF & CNF notations, Union, Concatenation and *'s of CFLs, Eliminating production & unit productions from CFG, Eliminating useless variables from a context Free Grammar. Parsing: Top-Down, Recursive Descent and Bottom-Up Parsing.		
Unit 4	Push Down Automata	5 Hours	9
	Definition, Deterministic PDA & types of acceptance, Equivalence of CFG's & PDA's.		
Unit 5	CFL's and non CFL's	5 Hours	9
	Pumping Lemma and examples, intersections and complements		
Unit 6	Turing Machines	10 Hours	9
	Models of computation, definition of Turing Machine as Language acceptors, combining Turing Machines, Computing a function with a TM, Non-deterministic TM and Universal TM, Recursively enumerable languages, Unsolvable problems.

Course Code:	24DSEU5E10
Course Name:	IT infrastructure

L	T	P	Credit
3	0		3

Course Prerequisites:

Basic knowledge of computer systems, operating systems, computer networks, and fundamental Linux commands is recommended.

Course Description:

This course covers the fundamentals of Linux-based IT infrastructure, including system configuration, server administration, security, networking, and automation, with an emphasis on practical implementation and management.

Course Outcomes: After the completion of the course the student will be able to -

		SDGs
CO1	Study IT Infrastructure Management and configurations	9,16
CO2	Identify requirements of system software for devices and serves	4,9,10,16
CO3	Analyze the network resource allocation to devices and serves	9,11,16
CO4	Examine the Networks and Resources for reliability of services	7,8,9,12,13

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1					3		2	1	2		3	3	
CO2	1	1	2			3		3	2	3		3	3	3
CO3	1	2	2	2	2	3		3	2	3		3	3	3
CO4	1	3	3	3	3	3	3	3	3	3	3	3	3	3

Assessment Scheme:

SN	Assessment	Weightage	Remark

Course Contents:		SDGs
Unit 1	Basics of IT Infrastructure Configuration	7 Hours
Configuration, User accounts, User authentication methods, Interface types and properties, Configuration groups, Configuration archival, Logging and tracing, Identify methods of monitoring device, Interface statistics and errors,		9,16
Unit 2	Configuring a Web Server	7 Hours
Identifying the Main Configuration File, Creating Web Server Content, Understanding Apache Configuration Files, Creating Apache Virtual Hosts. Case study of Moodle Installation.		4,9,10,16
Unit 3	Configuring Permissions	7 Hours
Managing File Ownership, Displaying Ownership, Changing User Ownership, Changing Group Ownership, Managing Basic Permissions, Applying Read, Write, and Execute Permissions, Managing Advanced Permissions, Managing ACLs, Understanding ACLs		4,9,10,16
Unit 4	Hosting of Firewall and DNS	7 Hours
Understanding Linux Firewall, Firewall Configuration, Environmental Variable Configuration, Firewall for Campus Network, Configuration of DNS		9,11,16
Unit 5	Configuring SSH	7 Hours
Hardening the SSH Server, Limiting Root Access, Configuring Alternative Ports, Configuring Key-Based Authentication with Passphrases, Configuring SSH Tunnels		7,8,9,12,13
Unit 6	Automation in IT Infrastructure	7 Hours
Cloud Services for Server Automation, Server Health Monitoring, Hybrid Cloud services, Server Virtualization		7,8,9,12,13

		2	1

Course Prerequisites:

Computer Network and Programming Language like Java/Python

Course Description:

This course is designed to do the practical implementation of Cryptographic algorithms and have the hands-on experience on open source/free tools available to demonstrate the security concepts.

Course Outcomes:	After the completion of the course the student will be able to -	SDG
CO1	Demonstrate encryption and authentication mechanisms.	9,16
CO2	Implement various cryptographic algorithms using various programming languages.	4,9
CO3	Make use of various security tools to analyze the security concepts.	9,16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2		2		2									2	
CO3			2		3			2					2	

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal	100%	Practical performance, Internal oral

Handwritten signature

Course Contents:		SDG
Experiment No. 1 :Classical Encryption Techniques : Substitution Ciphers	2 Hours	4,9
To implement the program of substitution ciphers like Caesar Cipher, Playfair Cipher, Hill Cipher		
Experiment No. 2 : Classical Encryption Techniques : Transposition Ciphers	2 Hours	4,9
To implement the program of Transposition ciphers like Rail fence technique, Columnar transposition		
Experiment No. 3 : Symmetric Ciphers : DES	2 Hours	9
Implement a program to perform Encryption and Decryption using DES cipher		
Experiment No. 4 : Symmetric Ciphers : AES	2 Hours	9
Implement a program to perform Encryption and Decryption using AES cipher		
Experiment No. 5 : Asymmetric Ciphers : RSA Algorithm	2 Hours	9
Implement a program to perform Encryption and Decryption using RSA algorithm		
Experiment No. 6 :Key Exchange Algorithm: Diffie Hellman Algorithm	2 Hours	9
To implement a program using Diffie Hellman key exchange algorithm		
Experiment No. 7 : Message Integrity using Hash function	2 Hours	9,16
To implement the program on Hash functions –SHA, MD5 etc to show the integrity check on the files transferred		
Experiment No. 8 : Digital Signature algorithm using RSA or DSS Approach	2 Hours	9,16
Implement the Digital Signature algorithm using RSA approach (SHA256withRSA) or DSS approach(SHA256with DSA)		
Experiment No. 9 : Demonstration of Creation of Digital Signature & Digitally Signed Certificate	2 Hours	9,16
To implement a program to show encryption and decryption using RSA algorithm.		
Experiment No. 10 : Demonstration of SSL protocol	2 Hours	9,16
Working of SSL protocol using Network analyzer tools like Wireshark.		
Experiment No. 11 : Demonstration of User Authentication Tools	2 Hours	9,16
Use any of the user authentication tool like Kerberos, NTLM, LDAP, RADIUS		
Experiment No. 12 :Demonstration of Firewall & IDS/ IPS Systems	2 Hours	9,16
Use any of the Windows and Linux based firewall for demonstration		
Experiment No. 13 : Demonstration and Implementation of Malicious Softwares	2 Hours	9,16
Experiment No. 14 : Demonstration of VAPT Tools	2 Hours	9,16

List of Experiments		SDGs
1	Configure Linux system settings, user accounts, authentication methods, and monitor system logs and network interface statistics.	9,16
2	Install and configure the Apache Web Server and host a static website.	8
3	Configure Apache Virtual Hosts and deploy multiple websites; perform Moodle installation as a case study.	4,9,17
4	Manage file ownership, group ownership, and basic file permissions using Linux commands.	10,16
5	Configure advanced file permissions using SUID, SGID, Sticky Bit, and Access Control Lists (ACLs).	16
6	Configure the Linux Firewall and implement firewall rules for secure network access.	9,11
7	Install and configure a DNS server for domain name resolution.	9
8	Harden the SSH server by restricting root access, changing the default port, and configuring key-based authentication.	8,16
9	Configure SSH tunneling for secure remote access and communication.	8,9
10	Monitor server health, automate administrative tasks using shell scripts and cron jobs, and explore server virtualization.	7,12,13

Course Code:	24DSEU5014
Course Name:	Business Analytics Using Python

L	T	P	Credit
2			2

Course Prerequisites:

Basic understanding of programming concepts, Python, knowledge of statistics and basic mathematics knowledge of spreadsheets or data handling tools.

Course Description:

This course teaches students how to use Python for analyzing business data, identifying trends, and making informed decisions through real-world examples.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	To introduce students to the role of data in business decision-making	4, 8
CO2	To equip students with Python tools for data extraction, analysis, and visualization.	4, 9
CO3	To teach students to use statistical and machine learning methods for business insights.	8, 9
CO4	To develop real-world business intelligence solutions using Python.	9, 12

Course Contents:		SDGs
Unit 1	Introduction to Business Analytics & Python Basics	6 Hours
Role of Business Analytics in organizations Types of Business Analytics: Descriptive, Predictive, and Prescriptive Python Basics: Data types, functions, loops, list comprehension Python libraries: pandas, numpy, matplotlib, seaborn Working with data: CSV, Excel, JSON Data cleaning & preprocessing techniques		4, 9
Unit 2	Exploratory Data Analysis & Visualization	7 Hours
Understanding business problems through EDA statistics correlation, regression and hypothesis testing Advanced visualizations with seaborn and matplotlib Detecting outliers, missing values, and anomalies Case study: Retail sales data or marketing campaign data		8, 12
Unit 3	Predictive Analytics & Machine Learning	7 Hours
Introduction to supervised and unsupervised learning Regression models: Linear, Multiple, Logistic Classification: Decision Trees, KNN, Naive Bayes Clustering techniques: K-Means Model evaluation metrics (Accuracy, Precision, Recall, F1 Score) Business application examples (e.g., customer churn prediction, sales forecasting)		8, 9
Unit 4	Business Intelligence and Reporting with Python	8 Hours
Introduction to BI tools & Python integration, Automating reports with Python, Data storytelling and presentation, Working with dashboards using plotly, dash, or streamlit Capstone project: Solving a business case using Python		9, 13

Textbooks and Reference Books:

1. "Python for Data Analysis" by Wes McKinney
2. "Data Science for Business" by Foster Provost and Tom Fawcett
3. "Business Analytics: Data Analysis & Decision Making" by Albright & Winston
4. Online Python and Business Analytics resources: Kaggle, Towards Data Science, etc.

Course Prerequisites:

Database Engineering Concepts

Course Description:

Advanced Database Engineering is an extension to database systems. Advanced database focuses and presents the features, benefits of advanced data models like Object oriented & Object relational models. Explores ahead the extension of SQL to PL/SQL to draw the benefits to the database designer & to the developer's community. This course covers NoSQL Databases like Key-Value Database, Document Database, etc.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Understand and Use the knowledge of PL/SQL in writing queries	4, 9
CO2	Demonstrate the use of data mining & data warehousing techniques in business data analytics	8, 9
CO3	Illustrate design, architectures, data storage, distribution & query processing in Parallel & distributed databases.	9
CO4	Construct a database using the SQL security features.	9, 16

CO-PO Mapping:

Course Contents:			SDGs
Unit 1	Advanced SQL	6 Hours	4, 9
Introduction to PL/SQL, PL/SQL Functions & Procedures, Oracle Sequences, Embedded SQL			
Unit 2	Object-Database Systems	6 Hours	9
Motivating Example, Structured Data Types, Operations on Structured Data, Encapsulation and ADTs, Inheritance, Objects aIDs, and Reference Types, Database Design for an ORDBMS, ORDBMS Implementation Challenges, OODBMS, Comparing RDBMS, OODBMS, and ORDBMS			
Unit 3	NoSQL Database Management	7 Hours	9
Introduction, Data management with distributed databases, ACID and BASE NoSQL Types: Key-Value Database, Document Database, Column Family Database, and Graph Database Comparisonof relational databases and NoSQL			
Unit 4	Data Warehousing and Data Mining	8 Hours	8, 9
DATA WAREHOUSING AND DECISION SUPPORT: Introduction to Decision Support, OLAP: Multidimensional Data Model, Multidimensional Aggregation Queries, Finding Answers Quickly, Data Warehousing, Views and Decision Support, View Materialization. DATA MINING: Introduction to Data Mining, Counting Co-occurrences, Mining for Rules,Tree-Structured Rules, Clustering, Similarity Search over Sequences, Incremental Mining andData Streams, Additional Data Mining Tasks			
Unit 5	Parallel and Distributed Databases	8 Hours	9
Introduction, Architectures for Parallel Databases, Parallel Query Evaluation, ParallelizingIndividual Operations, Parallel Query Optimization, Introduction to Distributed Databases,Distributed DBMS Architectures, Storing Data in a Distributed DBMS, Distributed Catalog Management, Distributed Query Processing, Updating Distributed Data, Distributed Transactions,Distributed Concurrency Control, Distributed Recovery.			
Unit 6	Database Security	6 Hours	9, 16
Introduction to Database Security Issues, Discretionary Access Control Based on Granting andRevoking Privileges, Mandatory Access Control and Role-Based Access Control for MultilevelSecurity, SQL Injection, Privacy Issues, and Preservation, Challenges of Database Security, OracleLabel-Based Security			

Text Books:
1. Oracle® PL/SQL™ by Example FOURTH EDITION BENJAMIN ROSENZWEIG ELENA SILVESTROVA RAKHIMOV (Unit : 1) 2. Database Management System - Raghu Ramakrishnan, Johannes Gehrke - MGH, [4e] (Units: 2,4,5) 3. NoSQL for Mere Mortals- Dan Sullivan- 1st Edition, Pearson Education (Unit-3) 4. Fundamentals of Database Systems -R. Elmasri S. B. Navathe - Addison Wesley-Sixth Edition (Unit-6)

Confirmation

Reference Books:

1. Database System Concepts - Silberschatz, Korth, Sudarshan - MGH, 6th Edition
2. Data Mining - Margaret H. Dunham - Pearson Education
3. NoSQL Distilled: A brief guide to merging world of Polyglot persistence - Pramod J. Sadalage and Martin Fowler - Addison Wesley
4. Database Systems, Design, Implementation and Management - Coronel-Morris- Rob - Cengage Learning, [9e]

Course Code:	24DSEU6P02
---------------------	------------

Course Name:	Machine Learning
---------------------	------------------

L	T	P	Credit
3	0	0	3

Course Prerequisites:

Basic knowledge of linear algebra, probability & statistics, calculus, Python programming, and introductory data science concepts.

Course Description:

This course introduces the fundamental concepts, techniques, and applications of Machine Learning, covering supervised, unsupervised, and reinforcement learning methods, along with model evaluation, tuning, and basic deep learning, to equip students with practical skills for solving real-world data-driven problems using Python-based tools.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Apply fundamental machine learning algorithms such as regression, classification, and clustering to real-world problems	8, 9, 12, 13
CO2	Analyze and evaluate model performance using appropriate metrics and validation techniques.	4, 9, 16
CO3	Implement machine learning solutions using Python libraries	8, 9
CO4	Demonstrate understanding of advanced topics like neural networks, reinforcement learning etc.	8, 9, 10, 16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	3	2	3	2	1			2	1	1	1	3	3
CO2	2	3	2	3	2	1			1	1	1		3	3
CO3	2	2	2	2	2	1			1	1	1	1	3	3
CO4	2	2	2	2	2	1			1	1	1	1	3	3

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	In Semester Evaluation1 [10 Marks]	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	Mid Semester Examination [30 Marks]	30%	50% Course Contents
3	In Semester Evaluation2 [10 Marks]	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
4	End Semester Examination [50 Marks]	50%	100% Course Contents

Course Contents:			SDGs
Unit 1	Introduction to Machine Learning	6 Hours	4, 8, 9
Introduction to AI and ML, Types of Machine Learning: Supervised, Unsupervised, Reinforcement, ML Applications in Real World, Steps in Machine Learning Process, Overfitting & Underfitting, Evaluation Metrics: Accuracy, Precision, Recall, F1 Score			
Unit 2	Supervised Learning	9 Hours	8, 9, 12
Linear Regression (Single & Multiple Variable), Logistic Regression, k-Nearest Neighbors (k-NN), Support Vector Machines (SVM), Naïve Bayes Classifier, Decision Trees and Random Forests			
Unit 3	Unsupervised Learning	6 Hours	8, 9, 12
Clustering: K-Means, Hierarchical Clustering, Dimensionality Reduction: PCA, LDA, Anomaly Detection, Association Rule Mining (Apriori, FP-Growth)			
Unit 4	Neural Networks & Deep Learning Basics	7 Hours	4, 8, 9
Perceptron Model, Activation Functions, Multi-layer Perceptron, Forward and Backward Propagation, Introduction to Deep Learning & CNN basics, Overfitting in Deep Learning & Regularization (Dropout, L2)			
Unit 5	Model Evaluation and Tuning	6 Hours	4, 9
Cross-validation Techniques, Confusion Matrix, ROC-AUC Curve, Hyperparameter Tuning: Grid Search, Random Search, Feature Engineering and Selection			
Unit 6	Advanced Topics & Tools	8 Hours	8, 9, 10, 16
Reinforcement Learning: Q-learning, Markov Decision Process, Ensemble Methods: Bagging, Boosting (AdaBoost, XGBoost), ML Tools and Libraries: Scikit-learn, TensorFlow, Keras Applications: NLP basics, Image Classification, Ethics in Machine Learning & Bias Mitigation			

Text Books:
1. Tom M. Mitchell, Machine Learning, McGraw Hill, 1997.
2. Ethem Alpaydin, Introduction to Machine Learning, MIT Press, 4th Edition.
3. Aurélien Géron, Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, O'Reilly, 3rd Edition.

Reference Books:
1. Ian Goodfellow, Yoshua Bengio, and Aaron Courville, Deep Learning, MIT Press.
2. Kevin P. Murphy, Machine Learning: A Probabilistic Perspective, MIT Press.
3. Trevor Hastie, Robert Tibshirani, Jerome Friedman, The Elements of Statistical Learning, Springer.
4. Christopher Bishop, Pattern Recognition and Machine Learning, Springer.

Course Code: 24DSEU6P03

Course Name: Data Engineering Lab

L	T	P	Credit
0	0	2	1

Course Prerequisites:

SQL fundamental

Course Description:

Advanced Database Engineering is an extension to database systems. Advanced database focuses and presents the features, benefits of advanced data models like Object oriented & Object relational models. Explores ahead the extension of SQL to PL/SQL to draw the benefits to the database designer & to the developer's community. This course covers NoSQL Databases like Key-Value Database, Document Database, etc.

Course Outcomes: After the completion of the course the student will be able to -

		SDGs
CO1	Understand fundamentals of database management systems	4, 9
CO2	Analyze & construct good database design	4, 9
CO3	Apply SQL queries to design & manage the database	4, 9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	1	1		3	1	1			1	1	1		
CO2	1	3	2	3	2	3	1	3	1	1	3	2		
CO3	2	3	2	2	3	3	1	3	1	1	3	2		
CO4														

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal	50%	Practical performance, internal POE.
2	End Semester	50%	POE

Signature

Course Contents:	SDGs
Assessment No. 1 : Write a simple PL/SQL Program for the following i. Print the sum of "N" numbers ii. Check whether the input number is prime or not.	4, 9
Assessment No. 2 : Implement & Demonstrate Declaring, Defining, and Invoking a Simple PL/SQL Function for the below statement. i. Find the Factorial of the number.	4, 9
Assessment No. 3 : Implement a PL/SQL Procedure for the following i. Find a Maximum of three numbers using "IN" & "OUT" Parameters ii. Find the square of the Number using the "IN OUT" Parameter	4, 9
Assessment No. 4 : Using Oracle Sequence demonstrate creating and dropping of an auto-number field for Customer Table.	4
Assessment No. 5 : Demonstrate NoSQL Key-Value Database.	4
Assessment No. 6 : Demonstrate No SQL Document Database.	4
Assessment No. 7 : Demonstrate Data Control Language Commands	9, 16
Assessment No. 8 : Construct star schema. Demonstrate Fact and dimension tables	9
Assessment No. 9 : Examine SQL Injections.	9, 16
Assessment No. 10 : Demonstrate Object-oriented& Object Relational databases.	9

Text Book:
"1. Oracle® PL/SQL™ by Example FOURTH EDITION BENJAMIN ROSENZWEIG ELENA SILVESTROVA RAKHIMOV(Unit : 1) 2. Course Code:	23DSEU6P04	L	T	P	Credit
Course Name:	Machine Learning Laboratory			2	1

Course Prerequisites:

Basic understanding of Python programming, statistics, linear algebra, and use of libraries

Course Description:

This lab course provides hands-on experience with fundamental machine learning algorithms and techniques, enabling students to implement, train, evaluate, and visualize models using Python and popular libraries, aligned with real-world data science applications.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Perform data preprocessing and visualization using Python libraries.	4, 9
CO2	Implement and evaluate supervised and unsupervised learning models.	8, 9
CO3	Develop and test simple neural network models using various tools	8, 9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	2	2	3	2	2			1	1	2	1	3	3
CO2	2	3	2	3	3	2			1	1	3	1	3	3
CO3	2	2	2	3	3	3			1	1	3	1	3	3

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	In Semester Evaluation [25 Marks]	100%	Experiment, Practical Performance and Oral Exam etc.

List of Experiments:	SDGs
1 Introduction to Python Libraries	4, 8, 9
2 Implement Linear Regression to predict values	8, 9
3 Apply Logistic Regression for binary classification	8, 9, 16
4 Build a k-NN classifier for Iris dataset classification	4, 9
5 Create and visualize a Decision Tree classifier	8, 9, 16
6 Use Naïve Bayes for text-based spam email classification	8, 9, 16
7 Apply K-Means Clustering to customer segmentation	8, 9
8 Perform PCA on a dataset and plot the principal components	4, 9
9 Train a simple Neural Network using Keras to classify digits	8, 9
10 Use Confusion Matrix & Accuracy to evaluate a classification model.	4, 9

Course Contents:			SDG's
Unit 1	Introduction to Data Manipulation and Processing Tools	4 Hours	
Introduction to Google Colab and cloud-based analytics platforms, NumPy: Arrays, mathematical operations, broadcasting, and linear algebra functions, Pandas: DataFrames, Series, data import/export (CSV, Excel, JSON, databases), Data cleaning techniques: handling missing values, duplicates, outliers Data transformation: grouping, aggregation, merging, reshaping Working with time series data and date-time operations Introduction to Dask for big data processing			4,9
Unit 2	Data Visualization Tools and Techniques	4 Hours	
Matplotlib: Basic plotting, customization, subplots, and styling, Seaborn: Statistical visualizations, categorical plots, and advanced styling, Plotly: Interactive visualizations, dashboards, and web-based plots, Geographic data visualization with Folium, Introduction to Tableau for business intelligence			4,9
Unit 3	Advanced Analytics and Specialized Tools	6 Hours	
Natural Language Processing with NLTK and spaCy, Image processing with OpenCV and PIL, Web scraping tools: BeautifulSoup, Scrapy, and Selenium, API integration for data collection, Introduction to deep learning with TensorFlow and Keras, Time series analysis with statsmodels and Prophet			4,9
Practical Exercises:			
Exercise 1:	Setting up Google Colab environment and importing libraries	2 Hours	4, 9
Exercise 2:	Matplotlib: Basic plotting, customization, subplots, and styling	2 Hours	4, 9
Exercise 3:	Seaborn: Statistical visualizations, categorical plots, and advanced styling	2 Hours	4, 9
Exercise 4:	Plotly: Interactive visualizations, dashboards, and web-based plots	2 Hours	4, 9
Exercise 5:	Geographic data visualization with Folium	2 Hours	4, 9
Exercise 6:	Tableau desktop basics and dashboard creation	4 Hours	4, 9
Exercise 7:	Text preprocessing and sentiment analysis using NLTK/spaCy	4 Hours	4, 9
Exercise 8:	Image manipulation and computer vision tasks with OpenCV	4 Hours	4, 9
Text Books:			
1. "Python for Data Analysis" - Wes McKinney (O'Reilly Media) - 2nd Edition (Unit 1) 2. "Python Data Science Handbook" - Jake VanderPlas (O'Reilly Media) (Unit 2) 3. "Hands-On Machine Learning with Scikit-Learn and TensorFlow" - Aurélien Géron (O'Reilly Media) - 2nd Edition (Unit 3)			
Reference Books:			
1. "Data Visualization with Python and JavaScript" - Kyran Dale (O'Reilly Media) 2. "Natural Language Processing with Python" - Steven Bird, Ewan Klein, Edward Loper (O'Reilly Media) 3. "Learning OpenCV 4" - Adrian Kaehler, Gary Bradski (O'Reilly Media) 4. "Web Scraping with Python" - Ryan Mitchell (O'Reilly Media) 5. "Deep Learning with Python" - François Chollet (Manning Publications)

Course Code:	24DSEU6M06
Course Name:	Fundamentals of Business Intelligence

L	T	P	Credit
2	0	0	2

Course Prerequisites:

Basic knowledge of databases, data structures, and programming fundamentals. Familiarity with spreadsheet tools (e.g., Excel) and introductory statistics is recommended.

Course Description:

This course introduces the core concepts and tools of Business Intelligence, focusing on data analysis, visualization, and decision-making. Students will learn to use BI techniques and software to extract insights and support business strategies.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Define basic concepts ,Architecture and data warehousing related concepts of Business Intelligence	4,9
CO2	To demonstrate the impact of business reporting, information visualization, and dashboards.	8,9
CO3	To apply text analytics and web analytics business intelligence methods to various situations.	8,9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	2	2	2	3						1	2	3	2
CO2	1	2	2	2	2						1	2	3	2
CO3	1	2	2	2	2						1	2	3	2

Assessment Scheme:

Course Code:	24DSEU6E07		L	T	P	Credit
Course Name:	Cyber Security and Forensics	3				3

Course Prerequisites:

1. C, C++, Python or Java
2. Understanding of OS concepts (Linux/Windows)
3. Networking Basics
4. Data Structures and Algorithms concepts

Course Description:

This course introduces core concepts of cyber security and digital forensics, covering network protection, threat analysis, legal frameworks, and evidence handling. Students gain practical skills in forensic tools and security measures to counter modern cyber threats.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Identify and describe cyber threats and vulnerabilities	4, 9
CO2	Apply network security principles and tools to secure communication systems	4, 9
CO3	Demonstrate knowledge of cyber forensic techniques and tools	4, 9
CO4	Analyze digital evidence in accordance with legal and ethical frameworks	4, 16

CO-PO Mapping:

Course Contents:		SDGs	
Unit 1	Introduction to Cyber Security	8 Hours	
1.1 Fundamentals of Cyber Security 1.2 Security frameworks: NIST, ISO27001 and Types of cyber attacks (Phishing, DoS, Ransomware, MITRE Attack etc.) 1.3 Cyber threats and vulnerabilities 1.4 Information Security goals: CIA triad (Confidentiality, Integrity, Availability) 1.5 Security mechanisms and access control models 1.6 Basics of cryptography (Symmetric vs Asymmetric, Hashing, Digital Signatures)			4,8,9
Unit 2	Network Security	8 Hours	
2.1 SIEM basics: QRadar, Splunk and Incident Response Life Cycle 2.2 Network Security basics: Protocols (TCP/IP, DNS, HTTP) Ports 2.3 Network threats and attacks (Sniffing, Spoofing, MITM, ARP poisoning) 2.4 Firewalls, Firewall rules and types (packet-filtering, proxy, stateful) 2.5 Intrusion Detection Systems (IDS) and Intrusion Prevention Systems (IPS) 2.6 Virtual Private Networks (VPNs) 2.7 Secure socket layer (SSL), HTTPS, EDR Basics 2.8 Wireless network security protocols (WEP, WPA, WPA2)			4,9
Unit 3	Cyber Forensics Fundamentals	6 Hours	
3.1 Introduction to Cyber Forensics 3.2 Need for cyber forensics in investigation 3.3 Forensic investigation process (Acquisition, Analysis, Reporting) 3.4 Chain of custody 3.5 Legal and ethical issues in cyber forensics 3.6 Tools used in cyber forensics (FTK, EnCase, Autopsy)			4,9,16
Unit 4	Digital Evidence and Crime Scene Management	6 Hours	
4.1 Types of digital evidence (emails, logs, images, etc.) 4.2 Digital evidence collection and preservation 4.3 Imaging and cloning of digital media 4.4 Evidence handling procedures and documentation 4.5 Investigating disk, memory, mobile, and network-based evidence 4.6 Challenges in digital evidence handling			4,8,9
Unit 5	Cyber Laws and IT Act	6 Hours	
5.1 Overview of Indian IT Act 2000 and amendments 5.2 Legal aspects of digital signatures, electronic records 5.3 Cybercrime and related sections under IPC and IT Act 5.4 Intellectual Property Rights (IPR) in cyberspace 5.5 Cyber ethics and legal frameworks 5.6 Case studies on cybercrime			4,8,9,16

Handwritten signature

Unit 6	Emerging Trends and Case Studies	7 Hours	
6.1 Cybersecurity in IoT and cloud computing			4,8,9,16
6.2 Blockchain and security			
6.3 Artificial Intelligence in cybersecurity			
6.4 Case studies on recent cyber attacks and forensic investigations			
6.5 Role of CERT-IN, NCIIPC, and global agencies			
6.6 Best practices for securing digital assets

Course Contents:			SDGs
Unit 1	Introduction to Software Architecture	6 Hours	9
Definition and scope of software architecture, Architecture vs. design vs. implementation, Role of a software architect, Stakeholders and architecture concerns,Architecture business cycle, Types of architectural structures and views			
Unit 2	Architectural Styles and Patterns	8 Hours	9
Architectural styles: Layered, Client-Server, Pipe and Filter, Event-Based, Shared Data, Microservices, Architectural patterns: MVC, Broker, Blackboard, Service-Oriented Architecture, Use cases and comparisons of styles, Impact of styles on quality attributes			
Unit 3	Designing Software Architecture	6 Hours	9
Design process overview, Mapping functional requirements to architecture, Documenting software architecture, Architecture Description Languages (ADL) overview, Modeling with UML diagrams for architecture			
Unit 4	Quality Attributes in Architecture	7 Hours	9,16
Introduction to quality attributes, Scenarios for performance, modifiability, availability, security, usability, Architectural tactics for quality, Trade-offs and sensitivity points, Constraints and design decisions			
Unit 5	Architecture Evaluation and Analysis	6 Hours	8,9
Need for evaluation, Evaluation methods: ATAM (Architecture Tradeoff Analysis Method), CBAM (Cost Benefit Analysis Method), Risk identification and analysis, Case study-based analysis			
Unit 6	Architecture Practices & Case Studies	7 Hours	8,9
Introduction to Cloud-native and Microservices architecture, Serverless and Event-driven architecture, DevOps influence on architecture, Case studies: Amazon, Netflix, and Google architecture practices, Use of architecture in modern scalable systems,

Course Code:	24DSEU6E09
Course Name:	Internet of Things

L	T	P	Credit
3	0	0	3

Course Prerequisites:

Computer Networks and Internet fundamentals, Programming skills in C/C++ or Python, Basic understanding of sensors and electronic components

Course Description:

This course introduces the fundamentals of the Internet of Things (IoT) and its integration with cloud computing. It covers IoT architecture, sensors, microcontrollers (Arduino, ESP32, Raspberry Pi), communication protocols, and cloud platforms such as AWS. Students will learn to interface devices, collect data, and use cloud services for storage and analytics. The course also explores real-world IoT applications in various domains and addresses challenges related to security, privacy, and ethics.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Understand the fundamental concepts, architecture, and enabling technologies of the Internet of Things (IoT).	9
CO2	Demonstrate the ability to interface sensors and actuators with microcontrollers and implement basic IoT applications.	9
CO3	Analyze the use of wireless communication protocols and cloud services in designing scalable IoT solutions.	9
CO4	Apply data handling and analytics techniques to IoT applications and examine real-world use cases and	9, 11, 16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Contents:			SDGs
Unit 1	Fundamentals of IoT	7 Hours	9
Introduction, Definitions & Characteristics of IoT, IoT Architectures, Physical & Logical Design of IoT, Enabling Technologies in IoT, History of IoT, About Things in IoT, The Identifiers in IoT, About the Internet in IoT, IoT frameworks, IoT and M2M			
Unit 2	IoT Physical Devices and Endpoints	8 Hours	9
Microcontrollers, Introduction to Arduino board, various boards of Arduino. Arduino Uno : Arduino Uno Pin Layout, Arduino IDE, Arduino programming, ESP32 : ESP32 pin layout, advantages of ESP32 board, Interfacing sensors with microcontroller Raspberry-Pi : Introduction to Raspberry-Pi, installation of raspberry-pi, raspberry pi configuration,Introduction to Python, Interfacing sensors with raspberry pi.			
Unit 3	Sensors and Protocol	7 Hours	9
Sensors : Light sensor, temperature sensor with thermistor, voltage sensor, ADC and DAC, Gas sensors, Temperature and Humidity Sensor , Motion Detection Sensors, Wireless Bluetooth Sensors,Level Sensors, Embedded Sensors, Distance Measurement with ultrasound sensor, Biometric, Load, Flow, and pressure sensor Accuators: Actuators, Actuator Types, Actuator Characteristics. Protocol : Zigbee, Bluetooth and BLE, Cellular , LoRa and LoRaWAN, Wi-Fi, MQTT Wireless Technologies for IoT: WPAN Technologies for IoT: IEEE 802.15.4, Zigbee, HART, NFC, Z-Wave, BLE, Bacnet, Modbus. IP Based Protocols for IoT IPv6, 6LowPAN, RPL, REST, AMPQ, CoAP, MQTT. Edge connectivity and protocols			
Unit 4	IoT Physical Servers and Cloud Offerings	7 Hours	9
Introduction to Cloud Storage models and communication APIs Web Server – Web server for IoT, Cloud for IoT, AWS services for IoT			
Unit 5	Data Handling& Analytics	7 Hours	9
Introduction, Bigdata, Types of data, Characteristics of Big data, Data handling Technologies, Flow of data, Data acquisition, Data Storage, Introduction to Hadoop. Introduction to data Analytics, Types of Data analytics, Local Analytics, Cloud analytics and applications			
Unit 6	Applications of IoT	6 Hours	3, 7, 11, 13, 15, 16
Home Automation, Smart Cities, Energy, Retail Management, Logistics, Agriculture, Health and Lifestyle, Industrial IoT, Legal challenges, IoT design Ethics, IoT in Environmental Protection, Security and challenges in IoT

Course Code:	24DSEU6E10	L	T	P	Credit
Course Name:	Cyber Security and Forensics Tutorial		1		1

Course Prerequisites:	
1. C, C++, Python or Java	
2. Understanding of OS concepts (Linux/Windows)	
3. Networking Basics	
4. Data Structures and Algorithms concepts	

Course Description:	
This course deals with the theoretical background of Cyber security and Digital Forensics	

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Analyze and interpret system and network logs to detect potential security incidents.	9, 16
CO2	Apply packet and malware analysis techniques to identify threats and malicious behavior.	9, 16
CO3	Evaluate cyber threats using threat intelligence and correlate findings with MITRE ATT&CK techniques.	9, 16
CO4	Demonstrate the ability to respond to cyber incidents by implementing incident response and security rules.	9, 16

CO-PO Mapping:															
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	
CO1	2	2	1	1	2	1		3	1	2	3	1	3	1	
CO2	2	2	1	1	2	1		3	1	2	3	2	3	1	
CO3	2	2	2	2	2	1		3	1	2	3	1	3	1	
CO4	2	1	1	2	3	1		3	1	2	3	1	3	1	

Assessment Scheme:			
SN	Assessment	Weightage	Remark
1	In Semester Evaluation 1 (ISE1)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	Mid Semester Examination (MSE)	30%	50% of course contents
3	In Semester Evaluation 2 (ISE2)	10%	Assignment, Test, Quiz, Seminar, Presentation, etc.
4	End Semester Examination (ESE)	50%	100% course contents

Course Contents:	SDGs
Tutorial 1: Log Analysis -Analyze logs for failed login attempts, brute-force attacks, Web proxy, Firewall, WAF, EDR, Cloud, IPS, Windows, Email gateway(Tools to use: Splunk Free Edition / Qradar)	9, 16
Tutorial 2: SIEM Use Case - Create a custom correlation rule to detect brute-force login (Tools to use: QRadar Community Edition (CE))	9, 16
Tutorial 3: Log Filtering & Search - Use filters to extract logs for specific IP, user, or event type(Tools to use-)	9, 16
Tutorial 4: Packet Analysis - Capture and analyze packets to detect clear-text credentials (tools to use- Wireshark)	9, 16
Tutorial 5: Phishing Email Investigation Analyze email headers to detect spoofing/phishing attempts/ URL/ Attachment (tools to use: MXtoolbox/VirusTotal, urlscan.io/Anyrun)	9, 16
Tutorial 6: Threat Intelligence Lookup - Identify and check malicious IPs/domains using external sources(tools used-VirusTotal, AbuseIPDB, IPVoid)	9, 16
Tutorial 7: Malware File Analysis (Safe) - Use static and dynamic analysis to inspect a suspicious file (tools used-Any.Run, Hybrid Analysis, VirusTotal)	9, 16
Tutorial 8: EDR Alert Handling - Investigate malware/behavioral alerts(tools used: CrowdStrike Falcon (demo), SentinelOne (demo))	9, 16
Tutorial 9: Vulnerability Scanning -Scan a system and generate a vulnerability report(tools used:Nessus Essentials / OpenVAS/ Qualys)	9, 16
Tutorial 10: MITRE ATT&CK Mapping - Map attack patterns to MITRE techniques(MITRE ATT&CK Navigator (online tool))	9, 16

Course Code:	24DSEU6E11
Course Name:	Software Architecture Tutorial

L	T	P	Credit
	1		1

Course Prerequisites:

Software Engineering documentation, Object-oriented programming, design principles, Project Management

Course Description:

This tutorial course is designed to provide hands-on understanding of software architecture principles through guided exercises and case studies. Students will explore architectural styles, patterns, modeling techniques, quality attributes, and evaluation methods. The tutorials focus on real-world problem-solving, system design documentation, and architectural decision-making to bridge theoretical knowledge with practical skills.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Understand architecture basics, stakeholders, and architecture lifecycle	4,9
CO2	Apply architectural styles and patterns	9
CO3	Document and model architecture effectively	9
CO4	Evaluate and analyze architecture using quality attributes and trade-offs	8,9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1	1	1	1					3		2			2
CO2	1	1	2	1	2			1	3	1	1		3	1
CO3	1	1	1	1	3			2	3	2	1	1	3	1
CO4	1	1	2	1	2			2	3	2	2	1	2	2

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal Assessment (25 marks)	100%	Assignments, Case studies, Quizes.

Handwritten signature

Course Contents:		SDGs
Assessment No. 1 :Introduction to Software Architecture	1 Hours	4,9
Define architecture, design vs. implementation, and write an architecture business cycle for a given system		
Assessment No. 2 : Stakeholder Analysis	1 Hours	4,9
Identify stakeholders and their concerns for an online examination system		
Assessment No. 3 : Architectural Styles	1 Hours	9
Compare and contrast different architectural styles with examples		
Assessment No. 4 : Pattern-Based Design	1 Hours	4,9
Design a system using MVC or Layered architecture for a Library Management System		
Assessment No. 5 : UML-Based Architecture Modeling	1 Hours	8,9
Create Use Case and Component Diagrams for an E-Commerce application		
Assessment No. 6 :Architecture Documentation	1 Hours	8,9
Document architecture using 4+1 view model for a mobile banking app		
Assessment No. 7 : Quality Attribute Scenarios	1 Hours	9,11
Define and prioritize quality attributes (e.g., performance, security) for a Smart City Dashboard		
Assessment No. 8 :Tactics for Quality Attributes	1 Hours	9
Match architectural tactics to quality attributes using real examples		
Assessment No. 9 : Architecture Evaluation (ATAM)	1 Hours	3,9
Perform simplified ATAM for a Hospital Management System architecture.		
Assessment No. 10 : Modern Architecture Case Study	1 Hours	8,9
Analyze microservices-based architecture of Netflix/Amazon and map it to styles and patterns		

Text Book:
Software Architecture in Practice, Len Bass, Paul Clements, Rick Kazman, 3rd Edition, Addison-Wesley / Pearson

Handwritten signature

Course Code:	24DSEU6E12
Course Name:	Internet of Things Tutorial

L	T	P	Credit
0	1	0	1

Course Prerequisites:

Computer Networks and Internet fundamentals
 Programming skills in C/C++ or Python
 Basic understanding of sensors and electronic components

Course Description:

This course introduces the fundamentals of the Internet of Things (IoT) and its integration with cloud computing. It covers IoT architecture, sensors, microcontrollers (Arduino, ESP32, Raspberry Pi), communication protocols, and cloud platforms such as AWS. Students will learn to interface devices, collect data, and use cloud services for storage and analytics. The course also explores real-world IoT applications in various domains and addresses challenges related to security, privacy, and ethics.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Configure and program microcontrollers like Arduino, ESP32, and Raspberry Pi by interfacing various sensors and actuators.	9
CO2	Connect IoT devices to cloud platforms and visualize sensor data.	9
CO3	Implement IoT communication using protocols like MQTT and HTTP.	9
CO4	Develop a mini-project applying IoT and cloud integration in a real-world use case.	9, 11, 13, 15

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	2				2							3	1
CO2	3	1	2	1	1	1					2		3	2
CO3	2	3		2	2	2							3	3
CO4														

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	Internal	100%	Assignment, Test, Quiz, Seminar, Presentation, etc.

List of Experiments	SDGs
1 Study and setup of Arduino/ESP32 boards and basic programming using IDE	9
2 Interfacing LED and Push Button with Arduino/ESP32	9
3 Interfacing Temperature and Humidity sensor (e.g., DHT11) and displaying data	9, 13
4 Interfacing Ultrasonic sensor for distance measurement	9
5 Interfacing Gas sensor or Light sensor with ESP32/Arduino and displaying output	9,13
6 Interfacing with Actuators – DC Motor/Relay using Arduino/ESP32	9
7 Introduction to Raspberry Pi: OS Installation, Python Programming Basics	9
8 Sensor interfacing with Raspberry Pi and sending data over local network	9
9 Implementing communication between two IoT devices using MQTT protocol	9
10 Sending sensor data to cloud using ThingSpeak or Blynk platform	9
11 Using AWS IoT Core for device connection and real-time data visualization	9
12 Mini-project: Design and develop a complete IoT solution using microcontroller, sensors, cloud connectivity, and a simple dashboard for data monitoring	9, 7, 11, 13

Course Code:	24DSEU6E13	L	T	P	Credit
Course Name:	Blockchain Technology	3			3

Course Prerequisites:

Basics of Programming, networks, and cryptography

Course Description:

This course introduces the fundamentals of blockchain technology and smart contracts. It covers the architecture, cryptographic principles, consensus mechanisms, and key platforms such as Bitcoin and Ethereum. Students will gain hands-on experience in writing and deploying smart contracts using Solidity. The course also explores real-world applications of blockchain across industries like finance, supply chain, and healthcare.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Describe the fundamentals, architecture, and types of blockchain systems.	4,9
CO2	Analyze cryptographic techniques and consensus mechanisms used in blockchain.	4,9,16
CO3	Develop smart contracts using Solidity and deploy them on Ethereum-like platforms.	4,8,9
CO4	Build the solution to a real world problem using various blockchain platforms	4,9,16,17

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1				1				1	1	1			
CO2	2	2		1	2					1	2		1	
CO3	1	1	2	2	3			3		1	1	2	3	2
CO4	1	2	3	2	3	1	1	3	3	2	2	2	3	3

Assessment Scheme:

SN	Assessment	Weightage	Remark

Course Contents:			
Unit 1	INTRODUCTION TO BLOCKCHAIN	6 Hours	SDGs
Distributed DBMS – Limitations of Distributed DBMS, Introduction to Block chain -History, Evolution of Blockchain, Definition, Need of Blockchain, Distributed Vs Centralized Vs Decentralized, Public Ledgers : Blockchain as Public Ledgers, Distributed Ledger, Blockchain Categories – Public, Private, Consortium, Blockchain Network and Nodes, Peer-to-Peer Network, Mining Mechanism, Generic elements of Blockchain, Features of Blockchain, and Types of Blockchain, Benefits and Challenges of Blockchain Usages			4,9,16
Unit 2	BLOCKCHAIN ARCHITECTURE	7 Hours	
Blockchain Design Principles, Components of blockchain, Layered Architecture of Blockchain Ecosystem, Blockchain Architecture – Block, Hash, Distributed P2P, Merkle Tree, Structure of Blockchain- Types of Networks : Distributed Network , P2P Network, Consensus mechanism: Proof of Work (PoW), Proof of Stake (PoS), Byzantine Fault Tolerance (BFT), Proof of Authority (PoA) and Proof of Elapsed Time (PoET)etc. How Blockchain Works? Blockchain Demo - How Mining Works? (The NONCE and Cryptographic Puzzle) Immutable Ledger, Hard and Soft Forks, double spending			9,16
Unit 3	CRYPTO CURRENCY	6 Hours	
Bitcoin: Bitcoin and its History, Why use bitcoins? Where and how to buy bitcoins, Bitcoin transactions, How bitcoin transactions work, Bitcoin scripts and wallets. Ethereum: Ethereum Virtual Machine (EVM) – Wallets for Ethereum, Ethereum and Smart Contract, Solidity - Smart Contracts, Ether, Gas DApps , Decentralized Autonomous Organizations (DAO) Compare Bitcoin and Ether			8,9,16
Unit 4	SMART CONTRACT AND SOLIDITY FUNDAMENTALS	7 Hours	
Smart contracts, features of smart contract, types of Smart contract, advantages and challenges of smartcontract, Solidity: Introduction to solidity, Basic syntax, Data types, Operators, control flow, functions A programming structure in solidity			8,9
Unit 5	SOLIDITY ADVANCED	7 Hours	
Constructors, inheritance, abstract contracts, interfaces, events, mapping, error handling, libraries			4,8,9
Unit 6	DIFFERENT BLOCKCHAIN FRAMEWORKS AND USE CASES	6 Hours	
Study of Blockchain Frameworks: Hyperledger, IOTA, Corda, Multichain, Quorum etc. Different use cases of blockchain other than cryptocurrencies			8,9,16,17

Text Books:
1. Beginning Blockchain : A Beginner’s Guide to Building Blockchain Solutions By Bikramaditya Singhal, Gautam Dhameja, Priyansu Sekhar Panda, Apress Media. 2. Imran Bashir, “Mastering BlockChain: Distributed Ledger Technology, Decentralization and Smart Contracts Explained”, Packt Publishing, first edition – 2012 3. Satoshi Nakamoto, Bitcoin: A Peer-to-Peer Electronic Cash System 4. Mastering Ethereum: Building Smart Contracts and DAPPS, by Andreas Antonopoulos, Dr. Gavid Wood, Oreilly Publication 5. Anshul Kaushik, “BlockChain and Crypto Currencies”, Khanna Publishing House, Delhi

Reference Books:
1. Learn Ethereum: Build your own decentralized applications with Ethereum and smart contracts by by Xun (Brian) Wu , Zhihong Zou , Dongying Song

Course Code:	24DSEU6E14	L	T	P	Credit
Course Name:	Cloud Computing	3	0	0	3

Course Prerequisites:

Basic knowledge of computer networks, operating systems, and distributed systems.

Course Description:

Cloud Computing course will focus on the evolution of cloud environment, its architecture, types, prominent cloud platform examples, virtualization techniques and migration, docker-container & Kubernetes, security and management.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Explain the cloud computing architecture, types and models	4,9
CO2	Classify the virtualization techniques	7,12
CO3	Compare different architectures and platforms of cloud computing	8,9,17
CO4	Summarize security threats and security measure for cloud computing	16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	1	1	2				1	2	2	1	3	3
CO2	3	3	2	3	3				2	2	2	2	3	3
CO3	3	3	3	2	3	2	1	1	2	2	2	2	3	3
CO4	3	2	2	3	2	2	1		2	2	3	2	3	3

Assessment Scheme:

SN	Assessment	Weightage	Remark

Course Contents:			SDGs
Unit 1	Introduction	7 Hours	4,9
Definition, Historical Developments, Computing Platforms and Technologies. Building cloud computing environments, Principles of Parallel and Distributed Computing: Parallel versus Distributed Computing, Elements of Parallel Computing, Elements of Distributed Computing, and Technologies for Distributed Computing.			
Unit 2	Virtualization	7 Hours	7,12
Characteristics, Virtualization Techniques, Virtualization and Cloud Computing, Pros and Cons of Virtualization			
Unit 3	Cloud Computing Architecture	7 Hours	8,9,17
Cloud Reference Model, Types of Clouds – Public, Private, Hybrid and Community cloud, Types of Services – IaaS, PaaS, SaaS, Economics of Clouds, Open Challenges, Public Clouds: Amazon Web Services (AWS), Google Cloud Platform (GCP), and Microsoft Azure.			
Unit 4	Migration into cloud and Virtual machine Provisioning	7 Hours	9,12
Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud, Virtual Machines Provisioning and Manageability, Virtual Machine Migration Services, VM Provisioning and Migration in Action, Provisioning in the Cloud Context.			
Unit 5	Advanced Concepts – Docker, Container and Kubernetes	7 Hours	7,9
Introduction to CaaS, Why containers? Difference between Virtualization and Containers. Introduction to Containers, Docker and its architecture (Jain), Understanding Docker Container, Networking. Kubernetes – Introduction, Architecture. (cookbook) Case Study (Any case study available on the Internet such as - IBM, AWS, Google Qwiklabs using Kubernetes, docker container).			
Unit 6	Cloud Security & Management	7 Hours	16
Fundamental cloud security – Basic terms and concepts, Threat agents, cloud security threats, case study example. Cloud Management Mechanisms - SLA management and case study. Cloud Security Mechanisms – PKI, IAM and SSO with case studies.			

Text Books:
1. Mastering Cloud Computing - Buyya R, Vecchiola C, Selvi S T, McGraw Hill Education (India), 2013 2. Cloud Computing - Principles and Paradigms - Buyya R, Broberg J, Goscinski A, Wiley, 2011 3. Cloud Computing Concepts, Technology & Architecture - Thomas Erl, Zaigham Mahmood, and Ricardo Puttini 4. A to z on Docker: A complete Hands-On Guide to Docker Container – Swapnil Jain 5. Docker Cookbook - Sébastien Goasguen, O'reilly Nov. 2015 First Edition

Reference Books:
1. Cloud Computing Bible - Barrie Sosinsky ,Wiley Publishing Inc. 2011 2. Cloud Native DevOps with Kubernetes – John Arundel and Justin Domingus

Course Code:	24DSEU6E15	L	T	P	Credit
Course Name:	High Performance Computing	3	0	0	3

Course Prerequisites:

Data Structures and Algorithms, Computer Organization and Architecture, Operating Systems

Course Description:

This course introduces students to the concepts, techniques, and tools used in high-performance computing (HPC). Students will learn about parallel and distributed computing architectures, programming models, performance optimization techniques, and real-world applications.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Analyze different parallel computing architectures and select appropriate HPC systems	4,9
CO2	Design and implement parallel algorithms using various programming models	4,9
CO3	Evaluate and optimize the performance of parallel programs using profiling tools and optimization techniques	4,8,9
CO4	Apply HPC concepts to solve real-world computational problems	4,8,9

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Contents:		SDGs
Unit 1	Introduction to Parallel Architectures	8 Hours
Motivation for parallel computing and history, Sequential vs parallel processing, Parallel computer architectures and classifications, Shared-memory multiprocessors and interconnection networks, Distributed-memory multicomputers, SIMD computers and vector processors, Performance metrics and scalability analysis, Parallel programming models overview		4,9
Unit 2	Parallel Algorithm Design and Analysis	7 Hours
Parallel algorithm design methodology, Task/data decomposition strategies, Foster's parallel algorithm design methodology, Mapping techniques and load balancing, Parallel algorithm complexity analysis, Parallel efficiency and scalability, Case studies: parallel sorting and searching algorithms		4,9
Unit 3	Message-Passing Programming with MPI	8 Hours
Message-passing programming model, MPI programming basics and environment, Point-to-point communication functions, Collective communication operations, MPI data types and communicators, Performance analysis of MPI programs, Practical applications: Sieve of Eratosthenes, Floyd's algorithm, Matrix-vector multiplication using MPI		4,9
Unit 4	Advanced MPI Programming and Applications	7 Hours
Monte Carlo methods in parallel, Matrix multiplication algorithms, Solving linear systems of equations, Finite difference methods for PDEs, Parallel sorting algorithms, Fast Fourier Transform implementation, Combinatorial search algorithms, MPI debugging and optimization techniques		4,8,9
Unit 5	Shared-Memory Programming with OpenMP	6 Hours
Shared-memory programming model, OpenMP programming fundamentals, Parallel regions and work-sharing constructs, Data environment and variable scoping, Synchronization and critical sections, Performance considerations in OpenMP, Combining MPI and OpenMP (hybrid programming)		4,9
Unit 6	GPU Computing and Modern HPC Systems	7 Hours
Introduction to GPU computing architecture, CUDA programming model and memory hierarchy, Kernel development and thread management, Performance optimization for GPU computing, Parallel programming patterns and best practices, Modern HPC system architectures, Performance analysis tools and benchmarking, Future trends in high-performance computing		4,8,9

Text Books:

1. "Parallel Programming in C with MPI and OpenMP" by Michael J. Quinn, McGraw-Hill Education, First Edition, 2003 (Unit 1, Unit 2, Unit 3, Unit 4, Unit 5)
2. "Introduction to High Performance Computing for Scientists and Engineers" by Georg Hager and Gerhard Wellein, CRC Press, First Edition, 2010 (Unit 1, Unit 6)
3. "Programming Massively Parallel Processors: A Hands-on Approach" by David B. Kirk and Wen-mei W. Hwu, Morgan Kaufmann, Fourth Edition, 2022 (Unit 6)

Handwritten signature

Course Code:	24DSEU6E17	L	T	P	Credit
Course Name:	Cloud Computing Laboratory			2	1

Course Prerequisites:	
Basic understanding of computer networks, operating systems, and programming skills in Python or Java.	

Course Description:	
This laboratory course offers hands-on experience with fundamental cloud computing services and tools. Students will learn to work with virtual machines, cloud storage, databases, web hosting, and basic security features on platforms like AWS, Azure, or Google Cloud. The course aims to develop practical skills in deploying, managing, and monitoring cloud-based applications and resources.	

Course Outcomes:	After the completion of the course the student will be able to -
CO1	Use public cloud environment
CO2	Build virtual machines using virtualization techniques
CO3	Make use of containers for software deployment

CO-PO Mapping:															
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	SDGs
CO1	3		2		3	1					2	3	3	2	4,9
CO2	2		2		3	1					2	3	3	2	7,12
CO3	2		2		3	1					2	3	3	2	7,9

Assessment Scheme:			
SN	Assessment	Weightage	Remark
1	In Semester Evaluation [25 Marks]	100%	Experiment, Practical Performance and Oral Exam etc.

List of Experiments:		SDGs
1	Use Google Collab book for writing program	4,9
2	Use google APIs to access google cloud services	4,9
3	Create Virtual Machine using emulator - emue and virtual library	7,12
4	Create Virtual Machines using KVM library - paravirtualized machine	7,12
5	Create bare-metal virtual machine	7,12
6	Create container using lxc	7,9
7	Create a container using docker - docker desktop , docker CLI	7,9
8	Networking of Docker Containers	7,9
9	Building Docker Image	7,9
10	Check the usage reports or activity logs of your cloud resources.	12,16

Course Code:	24DSEU6E18	L	T	P	Credit
Course Name:	High Performance Computing Laboratory	0	0	2	1

Course Prerequisites:	Programming in C/C++, Basic knowledge of Linux/Unix systems
------------------------------	---

Course Description:	This laboratory course provides hands-on experience in parallel and high-performance computing. Students will implement parallel algorithms using various programming models including OpenMP, MPI, and CUDA.
----------------------------	---

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Implement and analyze parallel programs using shared memory programming model (OpenMP)	4,9
CO2	Develop distributed memory parallel applications using Message Passing Interface (MPI)	4,9
CO3	Design and optimize GPU-based parallel programs using CUDA programming model	4,8,9
CO4	Evaluate performance of parallel programs and apply optimization techniques using profiling tools	4,8,9

CO-PO Mapping:		PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Contents:		SDGs		
Experiment 1: Introduction to Parallel Computing Environment	2 Hours	4,9		
Objective: Set up and familiarize with parallel computing environment Tasks: Installation and configuration of GCC with OpenMP support Setting up MPI environment (OpenMPI/MPICH) Basic Linux commands for HPC environment Writing and compiling first "Hello World" programs in OpenMP and MPI Understanding system architecture using hardware detection tools				
Experiment 2: Shared Memory Programming with OpenMP - Basic Constructs	2 Hours		4,9	
Objective: Implement basic OpenMP parallel programs Tasks: Parallel regions and thread creation Work-sharing constructs: parallel for, parallel sections Variable scoping: private, shared, firstprivate, lastprivate Parallel computation of π using numerical integration Matrix addition and multiplication using OpenMP Performance analysis with different thread counts				
Experiment 3: OpenMP Synchronization and Advanced Constructs	4 Hours			4,9
Objective: Implement synchronization mechanisms in OpenMP Tasks: Critical sections and atomic operations Reduction operations for parallel summation Barrier synchronization Producer-consumer problem using OpenMP Parallel sorting algorithms (Bubble sort, Quick sort) Debugging race conditions and deadlocks				
Experiment 4: Message Passing Programming with MPI - Fundamentals	4 Hours	4,9		
Objective: Develop basic MPI applications Tasks: MPI initialization, rank identification, and finalization Point-to-point communication: MPI_Send and MPI_Recv Ring communication pattern implementation Parallel computation of factorial using MPI Master-slave architecture for parallel task distribution Performance comparison with sequential version				
Experiment 5: MPI Collective Communication Operations	4 Hours		4,9	
Objective: Implement collective communication in MPI Tasks: Broadcast operation (MPI_Bcast) for data distribution Scatter and Gather operations for data decomposition Reduce operations for parallel reductions Allreduce for global computations Parallel matrix-vector multiplication using MPI Implementation of parallel prefix sum algorithm				
Experiment 6: Introduction to GPU Computing with CUDA	4 Hours			4,9
Objective: Develop basic CUDA programs for GPU computing Tasks: CUDA environment setup and device query Writing first CUDA kernel for vector addition Memory management: host-device data transfer

Course Code:	24DSEU6N19	L	T	P	Credit
Course Name:	Web Application Development - II	1		2	2

Course Prerequisites:

Basic Programming Knowledge, Basic knowledge of HTML, CSS, and JavaScript, Introduction to Java, Basic knowledge of relational databases

Course Description:

This course provides comprehensive training in building full-stack web applications using React for the frontend and Spring Boot for the backend. Students will learn to design responsive user interfaces, develop RESTful APIs, and integrate both ends to create modern web applications. Emphasis is placed on component-based development, routing, state management, secure API development, and deployment.

Course Outcomes:	After the completion of the course the student will be able to -	SDGs
CO1	Design and implement dynamic user interfaces using React and its component-based architecture.	4,9
CO2	Develop secure and scalable backend services using Spring Boot and RESTful APIs.	9
CO3	Integrate frontend and backend technologies to build full-stack web applications.	8,9
CO4	Deploy and test full-stack applications with effective state management and secure API communication.	8,16

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	1										1			
CO2	1	2			2					1	2		1	
CO3	1	1	2	1	3			2				2	2	2
CO4	1	2		1	1							1	2	

Assessment Scheme:

SN	Assessment	Weightage	Remark
1	In Semester Evaluation	50%	Assignment, Test, Quiz, Seminar, Presentation, etc.
2	POE	50%	100% course contents

Course Contents:		SDGs
Unit 1	Introduction to React	4 Hours
Introduction to SPA and React.js JSX and Virtual DOM Functional Components and Props State and Lifecycle Methods Handling Events in React Conditional Rendering and Lists Forms and Input Handling Lifting State Up		4,9
Unit 2	Advanced React Features	4 Hours
React Hooks: useState, useEffect Context API and Custom Hooks React Router: Navigation, Route Parameters, Nested Routing Global State Management: useReducer, Context API Introduction to Redux (optional) API Calls using Axios / Fetch Error Handling and Loading States		4,9
Unit 3	Introduction to Spring Boot	4 Hours
Overview of Spring Framework and Spring Boot Spring Boot Architecture and Dependencies (Maven/Gradle) Building REST APIs with Spring Boot Annotations: @RestController, @RequestMapping, @PathVariable, @RequestBody Exception Handling in APIs Spring Data JPA and Hibernate CRUD Operations using Repositories Connecting to MySQL/PostgreSQL		8,9
Unit 4	Advance Spring Boot	4 Hours
Spring Boot Security Basics (JWT/OAuth2 overview) Role-Based Access Control (RBAC) Connecting React Frontend with Spring Boot Backend Handling CORS and API Authentication Environment Configuration and .env files Deployment of application Project: Full-stack CRUD application with secure login		8,16

Text Books:	
1	Full Stack Development with Spring Boot 3 and React by Juha Hinkula Packt Publishing; 4th edition
2	Learning Spring Boot 3.0: Simplify the development of production-grade applications using Java and

Experiment List	
1. Setup React Development Environment (Node.js, npm, VS Code) and create a basic React app 2. Create React components using JSX, Props, and State 3. Build forms in React and handle form events and validations 4. Implement routing in React using React Router 5. Use React Hooks (useState, useEffect) for state and side effects 6. Setup Spring Boot project using Spring Initializr and build a basic REST API 7. Develop CRUD operations using Spring Boot and MySQL/PostgreSQL 8. Implement exception handling and validation in Spring Boot APIs 9. Connect React frontend with Spring Boot backend using Axios 10. Implement user login and role-based authentication (Spring Security + JWT) 11. Manage environment variables and integrate .env in frontend/backend 12. Final mini-project: Develop and deploy a full-stack web app (e.g., Task Manager, E-Commerce Admin, Event Manager)	4, 8, 9, 16
